RE: Facility ID No. 003-00001, Tamarack Mills, LLC, New Meadows
Final Tier I Operating Permit Letter

Dear Mr. Kincaid:

The Idaho Department of Environmental Quality (DEQ) is issuing Tier I Operating Permit No. TI-050009 for Tamarack Mills, LLC, in accordance with IDAPA 58.01.01.300 through 386, Rules for the Control of Air Pollution in Idaho (Rules).

The enclosed permit is effective immediately, summarizes the applicable requirements for your facility, and requires an annual compliance certification for all emissions units. This permit replaces Tier I Operating Permit No. 003-00001, issued February 6, 2003, the terms and conditions of which shall no longer apply. The enclosed operating permit is based on the information contained in your permit application, received March 18, 2005. Modifications to and/or renewal of this operating permit shall be requested in a timely manner in accordance with the Rules.

Since this project does not significantly change the terms of your permit, DEQ will not contact you regarding a meeting to discuss the terms of the permit. However, if you wish to meet to discuss the permit terms and requirements, you may contact Leonard Herr of the Boise Regional Office to schedule a meeting. If a meeting is scheduled, DEQ recommends the following representatives attend the meeting: your facility's plant manager, responsible official, environmental contact, and any operations staff responsible for day-to-day compliance with permit conditions.

Pursuant to IDAPA 58.01.23, you, as well as any other entity, may have the right to appeal this final agency action within 35 days of the date of this decision. However, prior to filing a petition for a contested case, I encourage you to call Bill Rogers at (208) 373-0502 to address any questions or concerns you may have with the enclosed permit.

Sincerely,

3. TAMARACK ENERGY PARTNERSHIP COGENERATION UNIT

Summary Description

The following is a narrative description of the Tamarack Mills, LLC regulated in this Tier I operating permit. This description is for informational purposes only.

The Tamarack Mills, LLC produces electricity from a steam-powered turbine. Steam is produced in a wood waste-fired boiler capable of producing 72,000 pounds of steam per hour. A multiclone and wet scrubber control particulate matter emissions from the boiler. Ash collected from the boiler, multiclone, and scrubber is landfilled onsite. Energy removed from the steam in the condenser is exhausted to the atmosphere through a cooling tower.

Table 3.1 contains only a summary of the requirements that apply to the cogeneration unit. Specific permit requirements are listed below Table 3.1.

Table 3.1 APPLICABLE REQUIREMENTS SUMMARY

Permit Conditions	Parameter	Permit Limit / Standard Summary	Applicable Requirements Reference	Monitoring & Recordkeeping Requirements
3.1	PM	0.08 gr/dscf corrected to 8% oxygen	Permit Condition 2 PTC, 12/30/82	3.3, 3.4, 3.6
3.2	Visible emissions	20% opacity for no more than three minutes in any 60-minute period	Permit Condition 1 PTC, 12/30/82	2.8, 3.5

Permit Limits / Standard Summary

- 3.1 The permittee shall not discharge to the atmosphere from any fuel-burning equipment particulate matter in excess of 0.080 gr/dscf of effluent gas corrected to 8% oxygen by volume when fueled by wood products.

[PTC, 12/30/82; IDAPA 58.01.01.675]

- 3.2 The permittee shall not discharge any air pollutant to the atmosphere from any point of emission for a period or periods aggregating more than three minutes in any 60-minute period which is greater than 20% opacity as determined by procedures contained in IDAPA 58.01.01.625. These provisions shall not apply when the presence of uncombined water, nitrogen oxides, and/or chlorine gas are the only reason(s) for the failure of the emission to comply with the requirements of this section.

Monitoring & Recordkeeping Requirements

3.3 The permittee shall monitor and record the following information on a daily basis:

- Feed rates
- Flue gas volumetric flow (combustion air)
- Energy production
- Other maintenance/operational variables as recommended by the manufacturer
- Scrubber pressure drop

[PTC, 12/30/82]

3.4 The permittee shall conduct a compliance test for particulate matter emissions from the wood-fired boiler in accordance with Permit Conditions 2.10 and 2.11 within 60 days of permit issuance. The permittee shall monitor and record operating parameters, including, but not limited to, the parameters listed in Permit Condition 3.3. 4. SAWMILL, MATERIAL TRANSPORT, AND MATERIAL HANDLING

Summary Description

The following is a narrative description of the sawmill, material transport, and material handling operations regulated in this Tier I operating permit. This description is for informational purposes only.

The sawmill processes logs into rough lumber. Logs are transported from the log storage piles by loader to the infeed of the sawmill at the de-barker. Bark is removed from the logs by ring de-barkers, transferred by chain to a hammer hog, and pneumatically conveyed to either an open storage pile or the cogeneration plant fuel building.

Chipping saws and band saws in the mill process the logs into lumber and cants (logs with one or more square sides). Cants are cut into rough lumber by the edger saws. Sawdust falls to the vibrating waste conveyor below the saws. The vibrating waste conveyor includes a screening section that separates the sawdust from edgings. Sawdust is delivered to a pneumatic conveyance system and transported to either the fuel house or a truck loadout bin. A target box disengages sawdust delivered to the fuel house from the air stream.

Edgings are conveyed to a chipper. Chips from the chipping saw and the chipper are conveyed to a truck loadout bin by a high-pressure pneumatic system.

Table 4.1 below describes the control devices used in controlling emissions from the sources regulated in this permit.

5.1 DEQ identified the following sources as sources that are not in compliance because of failure to obtain a permit to construct prior to construction or modification:

- Log de-barkers – emit PM and PM₁₀
- Chipper/Hog (reduces log ends and scrap wood to chips which are then sent to the boiler fuel pile or to a truck load-out bin for shipment) – emits PM and PM₁₀
- Two-cell cooling tower – emits small amounts of methanol and hydrochloric acid (a.k.a. muriatic acid) in mist form (they are used as a biocide to control plant growth and algae in the process water stream)
- Bark blow line and sawdust blow line (pneumatic conveyance of wood fuel) and target box – emit PM and PM₁₀
- Chip load-out blow line (pneumatic conveyance of wood chips to a truck load-out bin for shipment) and target box – emit PM and PM₁₀
- Diesel-fired water pump for emergency firefighting use

The permittee has the continuing responsibility to submit any supplementary information needed, including information for any other sources, in accordance with IDAPA 58.01.01.315.

5.2 Tamarack Mills, LLC shall submit a complete permit application and all additional information requested by DEQ for issuance of a facility-wide permit within 180 days of issuance of this Tier I operating permit.
