

Craig Cogger is a soil scientist at Washington State University–Puyallup. His research background includes organic nutrient management (biosolids, composts, manures, etc.), soil quality and C sequestration in agricultural and urban soils, cover crops, food safety, and organic vegetable farming systems. He makes presentations on soils, biosolids, composts, nutrient management, soil amendments, water quality, climate change, and food safety to agricultural, professional, volunteer, and student groups, and is part of a team that teaches a week-long compost facility operators' class at WSU Puyallup each year.
