

GROVELAND WATER AND SEWER DISTRICT

**P.O. Box 833
Blackfoot, ID 83221**

February 17, 2016

To whom it may concern,

The leadership of the Groveland Water and Sewer District believe the current water project to be categorically excluded from an environmental assessment.

The project consists of a well, meters, and four 119 gallon pressure tanks with portable backup generator provided, as needed, by City of Blackfoot Fire Department and about fifty feet of line from the well to the existing well house. The well is on the same plot of land where we have an existing well. The fifty feet of line will be on this existing well lot. The generator for backup power is a portable generator and pressure tanks will be sitting inside the existing well house. It is clear that the actions of the project do not individually or cumulatively have an impact on the human environment.

Sincerely,

Mary Ellen Braithwaite
Chairperson
Groveland Water and Sewer District
