Subject: Water Quality Certification for NWW-2012-560-B03

Dear Mr. Trulock:

Attached is the final §401 water quality certification for the above referenced project. The §401 process requires a public notice, and the comment period closed on January 11, 2013. No public comments regarding the §401 water quality certification were received by the Idaho Department of Environmental Quality. Therefore, DEQ is issuing the final certification.

If you have any questions or concerns, please do not hesitate to contact me at (208) 799-4370 or [john.cardwell@deq.idaho.gov](mailto:john.cardwell@deq.idaho.gov).

Sincerely,

A handwritten signature in blue ink that reads "John Cardwell".

John Cardwell  
Water Quality Manager  
Lewiston Regional Office

## Idaho Department of Environmental Quality Final §401 Water Quality Certification

January 14, 2013

**404 Permit Application Number:** NWW-2012-560-B03

**Applicant/Authorized Agent:** Nez Perce – Clearwater National Forest

**Project Location:** Forest Service road 373A, near the border of MT, Idaho County;  
Latitude 46°37'55", Longitude 114°33'55"

**Receiving Water Body:** Pack Creek

---

Pursuant to the provisions of Section 401(a) (1) of the Federal Water Pollution Control Act (Clean Water Act), as amended; 33 U.S.C. Section 1341(a)(1); and Idaho Code §§ 39-101 et seq. and 39-3601 et seq., the Idaho Department of Environmental Quality (DEQ) has authority to review activities receiving Section 404 dredge and fill permits, and issue water quality certification decisions.

Based upon its review of the joint application for permit, publicly noticed on December 12, 2012, DEQ certifies that if the permittee complies with the terms and conditions imposed by the permit along with the conditions set forth in this water quality certification, then there is reasonable assurance the activity will comply with the applicable requirements of Sections 301, 302, 303, 306, and 307 of the Clean Water Act, the Idaho Water Quality Standards (WQS) (IDAPA 58.01.02), and other appropriate water quality requirements of state law.

### Project Description

The project proposes to permanently place an estimated 300 cubic yards of native dirt fill material, 10 cubic yards of riprap, and 5 cubic yards of dredged material into Pack Creek. The project involves removing two culverts and constructing a 40-foot long by 14-foot wide clear-span bridge.

### Antidegradation Review

The WQS contain an antidegradation policy providing three levels of protection to water bodies in Idaho (IDAPA 58.01.02.051).

- Tier 1 Protection. The first level of protection applies to all water bodies subject to Clean Water Act jurisdiction, and ensures that existing uses of a water body, and the level of water quality necessary to protect those existing uses will be maintained, and protected (IDAPA 58.01.02.051.01; 58.01.02.052.01). Additionally, a Tier 1 review is performed for all new or reissued permits or licenses (IDAPA 58.01.02.052.07).

- Tier 2 Protection. The second level of protection applies to those water bodies considered high quality and ensures that no lowering of water quality will be allowed unless deemed necessary to accommodate important economic or social development (IDAPA 58.01.02.051.02; 58.01.02.052.08).
- Tier 3 Protection. The third level of protection applies to water bodies that have been designated outstanding resource waters and requires that activities not cause a lowering of water quality (IDAPA 58.01.02.051.03; 58.01.02.052.09).

DEQ is employing a water body by water body approach to implementing Idaho's antidegradation policy. This approach means that any water body fully supporting its beneficial uses will be considered high quality (IDAPA 58.01.02.052.05.a). Any water body not fully supporting its beneficial uses will be provided Tier 1 protection for that use, unless specific circumstances warranting Tier 2 protection are met (IDAPA 58.01.02.052.05.c). The most recent federally approved Integrated Report and supporting data are used to determine support status and the tier of protection (IDAPA 58.01.02.052.05).

### ***Pollutants of Concern***

The primary pollutant of concern for this project is sediment. As part of the Section 401 water quality certification, DEQ is requiring the applicant comply with various conditions to protect water quality and to meet Idaho WQS, including the water quality criteria applicable to sediment.

### ***Receiving Water Body Level of Protection***

This project is located on Pack Creek within the Lochsa Subbasin assessment unit (AU) ID17060303CL035\_02 (Pack Creek and tributaries). This AU has not yet been designated. Because DEQ presumes most waters in the state will support cold water aquatic life and primary or secondary contact recreation beneficial uses, undesignated waters are protected for these uses (IDAPA 58.01.02.101.01.a). In addition to these uses, salmonid spawning has been identified as an existing use based on Beneficial Use Reconnaissance Project fish data (2007).

The cold water aquatic life, salmonid spawning, and contact recreation beneficial uses in this Pack Creek AU are fully supporting (2010 Integrated Report). As such, DEQ will provide Tier 1 and Tier 2 protection for aquatic life and recreation beneficial uses (IDAPA 58.01.02.051.01; 58.01.02.051.02).

### ***Protection and Maintenance of Existing Uses (Tier 1 Protection)***

As noted above, a Tier 1 review is performed for all new or reissued permits or licenses, applies to all waters subject to the jurisdiction of the Clean Water Act, and requires demonstration that existing uses, and the level of water quality necessary to protect existing uses shall be maintained, and protected. The numeric and narrative criteria in the WQS are set at levels that ensure protection of designated beneficial uses.

During the construction phase, the applicant will implement, install, maintain, monitor, and adaptively manage best management practices (BMPs) directed toward reducing erosion, and minimizing turbidity levels in receiving water bodies downstream of the project. In addition,

permanent erosion and sediment controls will be implemented, which will minimize or prevent future sediment contributions from the project area. As long as the project is conducted in accordance with the provisions of the project plans, Section 404 permit, and conditions of this certification, then there is reasonable assurance the project will comply with the state's numeric and narrative criteria. These criteria are set at levels that protect, and maintain designated, and existing beneficial uses.

### ***High-Quality Waters (Tier 2 Protection)***

Pack Creek is considered high quality for aquatic life and contact recreation beneficial uses. As such, the water quality relevant to aquatic life and contact recreation beneficial uses of Pack Creek must be maintained and protected, unless a lowering of water quality is deemed necessary to accommodate important social or economic development.

To determine whether degradation will occur, DEQ must evaluate how the permit issuance will affect water quality for each pollutant that is relevant to NWW-2012-560-B03 of Pack Creek (IDAPA 58.01.02.052.06). These pollutants include sediment, temperature and *E. coli*. Project activities are not expected to be a contributing source of *E. coli* to Pack Creek; therefore, this project will not cause degradation with respect to recreational uses.

Project activities are not expected to contribute to temperature loading in Pack Creek. The removal of riparian vegetation must be kept to a minimum to avoid erosion, maintain habitat, and prevent an increase in solar radiant heating to Pack Creek. Additionally, revegetation efforts must restore pre-project shade conditions. This project must also be carried out in a manner that prevents sediment from entering the stream uncontrolled. Although this project may result in minimal short term sediment impacts to the water body, DEQ does not expect long term impacts or degradation to the Pack Creek AU. The project to replace 2 old undersized culverts and construction of a new steel beam treated timber bridge will accommodate high water flows, and allow for aquatic organism passage. In addition, there will be minor stream realignment to add meanders to a straightened channel. Planting will be done to stabilize stream banks. DEQ therefore concludes that this project complies with IDAPA 58.01.02.051.02 and IDAPA 58.01.02.052.06. The permit ensures that the level of water quality necessary to protect both designated and existing uses is maintained and protected in compliance with IDAPA 58.01.02.051.01, IDAPA 58.01.02.052.05, and 40 CFR § 131.12(a)(1).

## **Conditions Necessary to Ensure Compliance with Water Quality Standards or Other Appropriate Water Quality Requirements of State Law**

### ***General Conditions***

1. This certification is conditioned upon the requirement that any modification (e.g., change in BMPs, work windows, etc.) of the permitted activity shall first be provided to DEQ for review to determine compliance with Idaho WQS and to provide additional certification pursuant to Section 401. Such modifications may not be implemented until DEQ has determined whether additional certification is necessary.

2. DEQ reserves the right to modify, amend, or revoke this certification if DEQ determines that, due to changes in relevant circumstances—including without limitation, changes in project activities, the characteristics of the receiving water bodies, or state WQS—there is no longer reasonable assurance of compliance with WQS or other appropriate requirements of state law.
3. If ownership of the project changes, the certification holder shall notify DEQ, in writing, upon transferring this ownership or responsibility for compliance with these conditions to another person or party. The new owner/operator shall request, in writing, the transfer of this water quality certification to his/her name.
4. A copy of this certification must be kept on the job site and readily available for review by any contractor working on the project and any federal, state, or local government personnel.
5. Project areas shall be clearly identified in the field prior to initiating land-disturbing activities to ensure avoidance of impacts to waters of the US beyond project footprints.
6. The applicant shall provide access to the project site and all mitigation sites upon request by DEQ personnel for site inspections, monitoring, or to ensure that conditions of this certification are being met.
7. The applicant is responsible for all work done by contractors, and must ensure the contractors are informed of, and follow, all the conditions described in this certification, and the Section 404 permit.
8. If this project disturbs more than 1 acre, and there is potential for discharge of stormwater to waters of the US, coverage under the EPA Stormwater Construction General Permit *must* be obtained. More information can be found at <http://yosemite.epa.gov/R10/WATER.NSF/NPDES+Permits/Region+10+CGP+resources>.

### **Fill Material**

1. Fill material shall be free of organic and easily suspendable fine material. The fill material to be placed shall include clean earth fill, sand, and stone only.
2. Placement of fill material in existing vegetated wetlands shall be minimized to the greatest extent possible.
3. All temporary fills shall be removed in their entirety on or before construction completion.
4. Excavated or staged fill material must be placed so it is isolated from the water edge or wetlands and not placed where it could re-enter waters of the state uncontrolled.

### **Erosion and Sediment Control**

1. BMPs for sediment and erosion control suitable to prevent exceedances of state WQS shall be selected and installed before starting construction at the site. One resource that may be used in evaluating appropriate BMPs is DEQ's *Catalog of Stormwater Best Management Practices for Idaho Cities and Counties*, available online at <http://www.deq.idaho.gov/media/494058-entire.pdf>. Other resources may also be used for selecting appropriate BMPs.

2. Permanent erosion and sediment control measures shall be installed in a manner that will provide long-term sediment and erosion control to prevent excess sediment from entering waters of the state.
3. Top elevations of bank stabilization shall be such that adequate freeboard is provided to protect from erosion at 100-year design flood elevation.
4. Structural fill or bank protection shall consist of materials that are placed and maintained to withstand predictable high flows in the waters of the state.
5. A BMP inspection and maintenance plan must be developed, and implemented. At a minimum, BMPs must be inspected and maintained daily during project implementation.
6. All construction debris shall be properly disposed of so it cannot enter waters of the state or cause water quality degradation.
7. Disturbed areas suitable for vegetation shall be seeded or revegetated to prevent subsequent soil erosion.
8. Maximum fill slopes shall be such that material is structurally stable once placed and does not slough into the stream channel during construction, during periods prior to revegetation, or after vegetation is established.

### ***Turbidity***

1. All practical BMPs on disturbed banks and within the waters of the state must be implemented to minimize turbidity during in-water work.
2. Containment measures such as silt curtains, geotextile fabrics, and silt fences must be implemented, and properly maintained to minimize in-stream sediment suspension, and resulting turbidity.
3. Turbidity monitoring must be conducted; a properly and regularly calibrated turbidimeter is recommended. Turbidity shall not exceed background turbidity by more than fifty (50) nephelometric turbidity units (NTU) instantaneously or more than twenty-five (25) NTU for more than ten (10) consecutive days. If an exceedance occurs, the applicant must inspect the condition of the project BMPs. If the BMPs appear to be functioning to their fullest capability, then the applicant must modify the activity (this may include modifying existing BMPs).

### ***In water Work***

1. Construction affecting the bed or banks shall take place only during periods of low flow.
2. Work in waters of the state shall be restricted to areas specified in the application.
3. To minimize sediment transport, stream channel or stream bank stabilization must be completed prior to returning water to a dewatered segment.

### ***Pollutants/Toxics***

1. The use of chemicals such as soil stabilizers, dust palliatives, sterilants, growth inhibitors, fertilizers, and deicing salts during construction, and operation should be limited to the best estimate of optimum application rates. All reasonable measures shall be taken to avoid excess application and introduction of chemicals into waters of the state.

### ***Vegetation Protection and Restoration***

1. Disturbance of existing wetlands and native vegetation shall be kept to a minimum.
2. To the maximum extent practical, staging areas and access points should be placed in open, upland areas.
3. Fencing and other barriers should be used to mark the construction areas.
4. If authorized work results in unavoidable vegetative disturbance, riparian and wetland vegetation shall be successfully reestablished to function for water quality benefit at pre-project levels or improved at the completion of authorized work.

### ***Dredge Material Management***

1. Upland disposal of dredged material must be done in a manner that prevents the material from re-entering waters of the state.

### ***Management of Hazardous or Deleterious Materials***

1. Petroleum products and hazardous, toxic, or deleterious materials shall not be stored, disposed of, or accumulated adjacent to or in the immediate vicinity of waters of the state. Adequate measures and controls must be in place to ensure that those materials will not enter waters of the state as a result of high water, precipitation runoff, wind, storage facility failure, accidents in operation, or unauthorized third-party activities.
2. Daily inspections of all fluid systems on equipment to be used in or near waters of the state shall be done to ensure no leaks or potential leaks exist prior to equipment use. A log book of these inspections shall be kept on site and provided to DEQ upon request.
3. Equipment and machinery must be removed from the vicinity of the waters of the state prior to refueling, repair, or maintenance.
4. Equipment and machinery shall be steam cleaned of oils and grease in an upland location or staging area with appropriate wastewater controls and treatment prior to entering a water of the state. Any wastewater or wash water must not be allowed to enter a water of the state.
5. Emergency spill procedures shall be in place and may include a spill response kit (e.g., oil absorbent booms or other equipment).
6. Any spill less than 25 gallons must be cleaned up within 24 hours of the release but does not require reporting to DEQ. If the spill is less than 25 gallons and is not cleaned up within 24 hours, then it becomes a reportable quantity.
7. Any spill greater than or equal to 25 gallons must be cleaned up within 24 hours of the release and reported to DEQ by calling 1-800-632-8000 (Idaho State Communications Center). Any spill equal to or greater than 25 gallons is reportable immediately.
8. Any release that causes a sheen (of any size) in waters of the state must be reported immediately to the National Response Center at 1-800-424-8802 and the Idaho State Communication Center (1-800-632-8000).

### ***Culverts***

1. The culvert shall not constrict the stream channel and shall not be angled such that the outflow is directed toward the stream bank. The culvert's flow line shall match the existing stream invert at its entrance and exit. Adequate grade control shall be installed to prevent channel down cutting or excessive deposition from occurring.
2. The culvert shall be installed such that it does not impede fish passage.
3. The culvert outflow shall be armored with riprap to provide erosion control. This riprap will be clean, angular, dense rock that is free of fines and resistant to aquatic decomposition.
4. Culverts shall be sized appropriately to maintain the natural drainage patterns.

### ***Treated Wood***

1. Any use of treated wood materials in the aquatic environment must be conducted in accordance with DEQ's "Guidance for the Use of Wood Preservatives and Preserved Wood Products In or Around Aquatic Environments." This guidance is available online at [http://www.deq.idaho.gov/media/488795-wood\\_products\\_guidance\\_final.pdf](http://www.deq.idaho.gov/media/488795-wood_products_guidance_final.pdf).

## **Right to Appeal Final Certification**

The final Section 401 Water Quality Certification may be appealed by submitting a petition to initiate a contested case, pursuant to Idaho Code § 39-107(5) and the "Rules of Administrative Procedure before the Board of Environmental Quality" (IDAPA 58.01.23), within 35 days of the date of the final certification.

Questions or comments regarding the actions taken in this certification should be directed to John Cardwell, Lewiston Regional Office at (208) 799-4370 or [john.cardwell@deq.idaho.gov](mailto:john.cardwell@deq.idaho.gov).
